

Whether you are satinising, structuring, homogenising, brushing, roughing, cleaning, polishing, etc., the Finimaster® combines ease of use with a finish comparable to that of a stationary machine. The Finimaster®'s enthusiasm for work is reflected **in the wide range of** brushes, belts, finishing and abrasive wheels that can be used with this tool.

- Perfect finish
- Uniform finish
- Suitable for both plate and pipe materials
- Faster grinding, faster results

A **variable speed and powerful 1200-Watt** motor guarantee power and ease of use.

The ingeniously placed handgrip and the easily adjustable protective cover guarantee a **100% controlled working pressure.**

Result: a uniform and perfect finish in less time and using less material.

220% more volume abrasive material compared to the present wheels

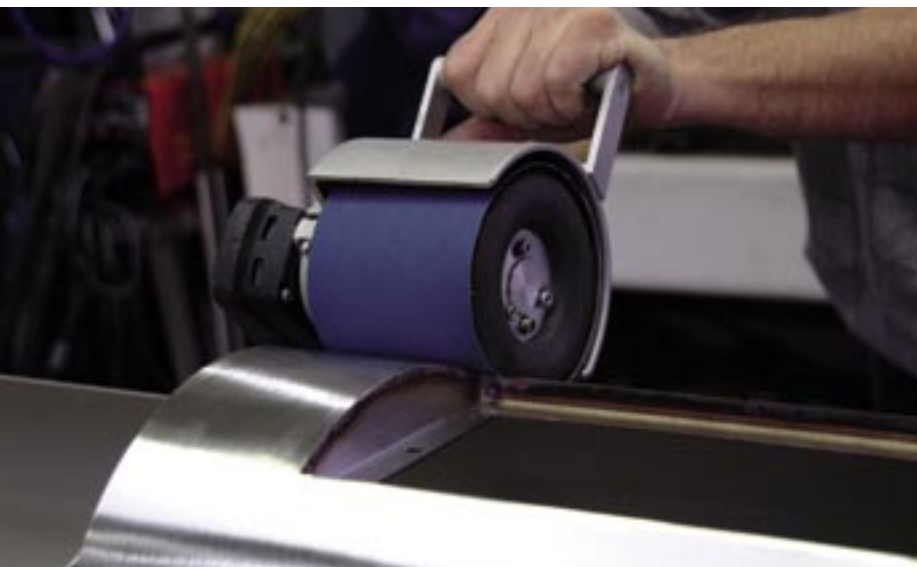

Easily rotated protective cover

Re-sealable open belts

Rapid and simple wheel change

Applications:

Can be used for:	For processing:
- Satinising	- Stainless steel
- Structuring	- Aluminium
- Homogenisation	- Brass
- Brushing	- Copper
- Roughening	- Plastic
- Cleaning	- Wood
- Polishing	- ...
- ...	

General characteristics:

- Adjustable speed:
1,200 to 3,700 rpm
- 1,200 Watt motor
- Tachometer-controlled constant speed of revolution. Also tachometer safe guarded against overloading.
- Double bearing mounted
- Easy to turn industrial protective cover
- Handgrip mounted directly above the grinding wheel for better control of working pressure.
- Supplied in a sturdy metal case.

The advantages:

- Uniform finish
- Faster grinding & faster results
- Material is removed more quickly & less material is removed
- Cooler grinding
- Up to 220% more abrasive material
- Perfect control of the operating pressure
- Suitable for both flat and tubular materials
- Possible to grind right into the corner
- You can grind from almost any position thanks to the ingenious rotating protective cover.
